EXPERIENCE

Software Developer

Tenderlake

📅 September 2023 – August 2025 📍 London, England, United Kingdom

- After completing my bachelor's degree, I joined Tenderlake as a software developer specializing in Microsoft technologies. My initial projects involved extracting procurement notices from data sources in multiple countries, including Ireland, the UK, Spain, and the US. Each source presented unique challenges, including handling various file formats, extracting contents from ZIP archives, and scraping dynamic websites with an automated browser instance, among others. I gained experience with libraries such as PuppeteerSharp, Json.NET, and Html Agility Pack.
- In many of my projects at Tenderlake, I utilized WinForms and SQL Server to process data extracted from a variety of sources. I also wrote and optimized SQL stored procedures for end-to-end data management. This work improved data quality, sharpened my SQL skills, and increased system responsiveness and scalability. Later projects utilized an API built from the ground up using ASP.NET and Python.
- To meet the demands of a startup, I had to take complete ownership of various projects from draft to deployment. The requirements asked went beyond just writing and testing code as a developer, and instead I had to enhance my skills built from university as product owner. With a natural passion in data, I was able to build upon my data analysis skills in SQL, Jupyter, Grafana, Excel and Python. I also published various formats of progress to the CEO like Microsoft Word documents, data-fed dashboards, kanban boards and recorded videos.

Software Engineer Associate

Infor

📅 October 2017 – July 2019 📍 Farnborough, England, United Kingdom

- I joined the Infor SunSystems R&D Department on a 2-year apprenticeship as a software developer. My first year was spent developing small applications to professional standards. A large part of this was improving and extending my analytical skills to undertake business and systems analysis. I acquired an in-depth knowledge of programming languages (Microsoft C#, Java, TypeScript, SQL, Angular) and database technologies on a variety of server and client operating systems. I also planned, designed, and conducted the testing of my applications and wrote end-user documentation.
- During this year I improved and extended my 'soft-skills', including communication with R&D Staff using a variety of media (Email, Skype, WebEx and Microsoft Teams), time management and working as part of a team. I also gained an appreciation of the importance of project planning using Microsoft Project and bug tracking using Jira.
- In Year 2, I was seconded to the Microsoft Development Team to assist with the development of the Department's core enterprise application, SunSystems to a web-based service using the Angular framework. Infor SunSystems is an integrated financial management, purchasing, sales, and inventory management application and has over 9,000 customers in 190+ countries.

ACHIEVEMENTS

Departmental Presentation

I presented a completed team project to the Department with an accompanying demonstration. This was well-received.

Student Representative

Elected by other students to represent the class in meetings designed to enhance student life at the college.

Ownership

Independently designed, developed, and maintained production-grade applications in a lean startup environment, demonstrating end-to-end ownership and resilience.

Adapting To Remote Working

I was quick to adapt to my new role as Software Engineer in a remote-first setting and maintain high productivity and motivation.

STRENGTHS

Data Admin

Hands-on experience optimizing SQL Server databases, writing and tuning stored procedures, reviewing databases for anomalies, and improving data quality and system performance.

Quick to learn new ideas and skills

Infor was at the cutting edge of new technologies, so much of my time was spent researching ways in which they could be applied to solve problems. At Tenderlake, I was lead in research and development of OpenAI's latest technology. This was later a key service provided to customers.

Analytical skills

Tasks typically involved analyzing requirements and, from them, designing and building software components into a finished solution.

Problem solving

A key part of my work involved advanced problem solving in which I was expected to analyze a problem, generate a variety of potential solutions and choose the most appropriate then implement and test it.

EDUCATION

BSc in Business and Management Studies

University of Sussex

 Sept 2019 - July 2023

BTEC Extended Diploma Level 3 in IT (Software Development)

East Surrey College

 Sept 2015 - June 2017

GCSE (Grade 5-1) Mathematics

Reading College

 Sept 2018 - June 2019

GCSE (A*-C) English, Mathematics & ICT

The Warwick School

 Sept 2011 - June 2015

Level 2 Extended Cert Performing Arts (Acting)

The Warwick School

 Sept 2011 - June 2013
